**Re: Lot Numbering System; S-Carb® Bags, S. America**

Dear Valued Customer:

The following is a description of the lot numbering system used by Genesis Alkali at its Green River facility for S-Carb® product, packaged in bags for the South American market. Each bag receives a lot number as it is filled.

Lot code = DDMMYYYY

For Example:

A Lot code of 18012017 represents product packaged on January 18, 2017.

The lot number is printed, at a minimum, on one side of each bag, and also serves as the manufacturing date. Bags are stacked on pallets in an alternating orientation and wrapped with clear stretch wrap so that lot codes are clearly visible on all sides of the pallet

In most cases, a batch number is printed directly above the lot number on the side of the bag. The batch number is an internal Genesis Alkali number used in production and marketing tracking. There is no customer usable information built into it.

Please contact me if you have any questions.

Sincerely,

Michael Kemmerer
